- » Expert knowledge of leading standards, such as:
  - » C2M2
  - » CIS CSC
  - » DHS CYBERSECURITY
  - » ISO 27000
  - » NIST CSF
  - » TY CYBER

Responding to growing cybersecurity demands (and costs) can be overwhelming for an organization of any size — and it takes valuable time and resources away from achieving other business goals. **Cybersecurity as a Service (CSaaS)** frees you from the challenge of identifying and mitigating technology risks and gives you the tools to thrive in a world where advanced cyber attacks devastate businesses every day.

Securance Consulting provides CSaaS to clients in all industries. Through the analysis of thousands of customer environments, we have learned which critical assessments enterprises should conduct annually. These assessments include:

- » External network vulnerability assessment and penetration test
- » Email phishing
- » Privileged user review of domain and critical enterprise application administrators
- » Rule-based configuration analysis of the Internet-facing firewall
- » User provisioning process review of one critical enterprise application

Our standard CSaaS package consists of the five assessments listed above. However, we understand that no two businesses or technology environments are alike. If the standard package does not fit your needs, we will work with you to develop a custom CSaaS package.

**Gain protection, prevention, and peace of mind with CSaaS. To learn more, contact Securance today.**
